

Water Distribution Truck

This truck is designed for transporting and distributing water. It is commonly used for irrigation, street cleaning, or fire suppression purposes.

Overview

Professional Water Distribution Solution

This high-capacity water distribution truck is engineered for reliability and efficiency in irrigation, street cleaning, and municipal water transport tasks. Featuring a robust 8000-liter capacity tank with anti-corrosive treatment, it is built to endure demanding operational environments. Powered by a 140 hp engine, this vehicle combines heavy-duty performance with essential features like air braking and power steering for safe, controlled navigation.
