

Water Filling Tool with Valve and Hose Connector

This water filling tool features a cylindrical metal body with threaded ends for secure connections. It incorporates a brass valve with a red handle for controlling water flow, and a barbed fitting for hose attachment.

Product Overview

Professional Water Filling Solution

The Water Filling Tool is a high-precision component designed for efficient fluid transfer and filling operations. Featuring a robust cylindrical metal body and a reliable integrated brass valve, it offers professional-grade flow control for industrial applications. The unit is equipped with standard M14 threading and a barbed connector to ensure secure, leak-proof hose integration.

Technical Specifications

Connection Type	M14 Male, M14 Female
Flow Control	Brass valve with manual red handle
Fitting Style	Barbed connector
Internal Port Size	0.25 inch
