

Water Filter Cartridge with Polyphosphate

This cylindrical filter cartridge is designed for water purification systems, removing sediment and impurities. Constructed from sodium polyphosphate, it improves water taste and odor for cleaner, safer drinking water.

Product Overview

Water Filter Cartridge with Polyphosphate

This cylindrical filter cartridge is designed for professional water purification systems, utilizing high-quality sodium polyphosphate media. It is engineered to effectively treat water by reducing sediment, chlorine, and impurities, which significantly improves taste and odor. Compatible with various water dispenser models, this cartridge offers a reliable solution for maintaining clean and safe drinking water in both household and commercial environments.

Technical Specifications

Maintenance

- Easy to install
- Simple to replace

Model Number	KCSP-10
Filtration Material	Sodium Polyphosphate
Applications	Household, Commercial, Water Dispenser Systems
