

Water Filtration System

This system purifies water for the entire household. It removes impurities and ensures access to clean water from every tap.

Product Overview

Professional Water Filtration System

This high-performance water filtration system is designed for professional applications, ensuring clean and purified water output. Engineered for durability and efficiency, the unit provides a reliable solution for various industrial and commercial water treatment needs. The compact architecture allows for straightforward integration into existing fluid management infrastructures.

Technical Specifications

Filtration Capacity

4300 L/h

Flow Rate Capacity

Model Availability

- GL4300BC
- GL4300GT

Compliance and Standards

Certifications

ISO Certified, Industrial Standard
