

Water Pump Performance Testing System

This comprehensive system is designed for factory testing of water pumps. It includes modules for evaluating pump performance, featuring a control panel with digital displays for monitoring test parameters and manual controls for adjusting settings.

Product Overview

Professional Performance Testing Solution

This water pump performance testing system is engineered to provide precise quality control and performance validation for industrial pumps. It evaluates critical metrics including flow rate, pressure, power consumption, and overall efficiency to ensure compliance with stringent industry standards. Designed for factory environments, the system features an integrated control panel and a robust, safety-hardened housing for reliable daily operation.

Core Testing Parameters

4 types

Key Performance Metrics

Technical Features

System Functionality

- Digital parameter monitoring
- Flow rate measurement
- Pressure evaluation
- Power consumption analysis
- Manual control adjustments
- Emergency stop mechanisms

Safety and Compliance

Safety Standards

Emergency Stop, Industrial Grade, Quality Control Compliant
