

Water Pump Pressure Switch

This pressure switch monitors water pressure in a system. It automatically controls the pump to maintain a desired pressure range.

Product Overview

Reliable Pump Control

This high-quality pressure switch is engineered to monitor water pressure within a system and automatically regulate pump operation. Designed for durability with a robust housing, it protects sensitive internal components from environmental wear. The unit features adjustable settings and a standard threaded connection, making it suitable for residential, commercial, and industrial water applications.

Technical Specifications

Key Features

- Automatic pump control
- Robust protective housing
- Standard water line threading
- Compatible with residential and industrial systems

Installation	Threaded connection
Adjustable Pressure	Yes
Common Applications	Residential, Commercial, Industrial
