

Water Purification System Components

Precision-engineered components designed for water purification, filtration, and processing systems. The collection includes screws, barrels, and related hardware for efficient and reliable performance in industrial water treatment applications.

Product Overview

Industrial Water Purification Components

These precision-engineered components are designed for high-performance water purification and industrial filtration systems. The collection includes specialized screw elements and barrel sections engineered for modular configuration and reliable fluid processing. Built to exacting standards, these components ensure optimal system integration and consistent performance in demanding water treatment applications.

Technical Specifications

Primary Applications

- Water Purification
- Industrial Filtration
- Water Processing Machinery

Component Types

Screw Elements • Barrel Sections • Modular Hardware

Model Identifiers

SLJ-700DDDDDDWSP/NDL2, SLJ-70ASCREW, SLJ-900SCREW
