

Water Softening System for Industrial Use

This water softener is designed for integration within agricultural or industrial water systems. It features a translucent housing to visually monitor the softening media and is constructed from durable materials for long-term reliability.

Product Overview

Industrial Water Softening Solution

This water softening unit is engineered specifically for integration into industrial and agricultural water distribution networks. Its durable construction ensures long-term reliability even when operated in demanding environmental conditions. The system features a compact, space-saving design that is ideal for facilities with confined installation areas.

System Design

Housing Configuration	Translucent housing for media monitoring
Build Quality	Industrial Grade, Durable Construction, Compact Design

Connectivity

Port Configuration

- Standard inlet port
- Standard outlet port

Applications

Target Use Cases

Agricultural • Industrial
