

Waterproof Coating for Underground Construction

This is a high-performance waterproof coating designed for underground construction applications. It provides a durable and reliable barrier against water penetration, protecting structures from moisture damage and corrosion.

Product Overview

High-Performance Underground Protection

This specialized waterproof coating is engineered specifically for underground construction applications, providing a robust and durable barrier against water penetration. It is designed to protect critical structures such as tunnels, basements, and foundations from moisture damage and long-term corrosion. By ensuring superior structural integrity, this solution effectively prevents costly water-related issues in challenging below-ground environments.

Technical Specifications

Coating Type	Oil-based waterproof coating
Packaging Weight	20 kg

Application Areas

Suitable Environments	Tunnels, Basements, Foundations, Below-ground structures
-----------------------	--

Performance Features

Benefits

- Prevents water penetration
- Protects against moisture damage
- Prevents structural corrosion
- Ensures long-term structural integrity
