

Welded Steel Pipe

Welded steel pipes are manufactured for use in construction and industrial applications. A protective coating is applied for corrosion resistance.

Product Overview

Industrial Welded Steel Pipes

These high-quality welded steel pipes are engineered for versatile industrial use, ranging from structural support in construction to fluid conveyance systems. Featuring a protective blue coating to enhance corrosion resistance and durability, these pipes are designed to withstand rigorous environmental conditions. Each unit is processed with precision, ensuring consistent diameter and wall thickness for reliable performance across various infrastructure projects.

Surface Coating	Anti-corrosive, Protective Coating
