

Welding and Power Diesel Generator

This portable diesel generator is designed for welding and power generation. It is suitable for providing electrical power in remote locations or during power outages.

Overview

Versatile Power and Welding Solution

This robust diesel generator is engineered for dual functionality, serving as both a reliable power source and a high-performance welding unit. Designed for portability and durability, it features a heavy-duty frame suitable for demanding on-site operations. Whether you are working in remote locations or need emergency backup power, this unit provides the versatility and reliability required for professional industrial applications.

Technical Specifications

Fuel Type

Diesel

Design Features

- Portable design
- Robust protective frame
- Integrated control panel
- Analog gauges and switches

Model Identifier

W190DR

Primary Functions

Welding, Power Generation
