

Welding and Power Generation Alternator

This dual-use alternator provides both welding and electrical power capabilities. It features a control box with a rotary switch, digital display, output terminals, sturdy base, and cooling ventilation.

Product Overview

Dual-Purpose Industrial Power Solution

The SD/SDC series is a versatile alternator designed for dual-use applications, providing both professional-grade welding capability and electrical power generation. Built for reliability, this unit is an ideal mobile or stable power supply for workshops, construction sites, and marine environments. It offers the flexibility to run lighting or welding equipment individually, or to operate both functions simultaneously for maximum efficiency.

Technical Specifications

Operating Modes

- Individual welding operation
- Individual lighting/power generation
- Simultaneous welding and power generation

Suitability

Industrial, Workshop, Marine, Mobile Power, Construction

Construction

Design & Build

- Robust blue powder-coated finish
- Top-mounted control box
- Integrated digital display
- Heavy-duty base mount
- High-efficiency ventilation cooling
