

Welding Workstation for Multiple Welding Processes

This welding station supports operation by a single or dual operator. It is capable of performing MMA, TIG, semi-automatic welding, and FCAW, and is compatible with low hydrogen and cellulose electrodes.

General Information

Professional H700 Welding Workstation

The H700 Welding Workstation is a robust and versatile solution engineered for professional welding applications. Designed for both field and shop environments, this unit features a powerful engine-driven generator capable of supporting stick, TIG, MIG, and flux-cored welding processes. Its durable construction and precision control panel ensure reliable arc performance and high-quality results in demanding industrial settings.

Technical Specifications

Design & Build

- Durable heavy-duty construction
- Protective enclosure for demanding environments
- Engine-driven welding generator
- Precise parameter control panel

Supported Welding Processes

Stick, TIG, MIG, Flux-cored

Operational Capabilities

Application Versatility

Field Use • Shop Use
