

Wheel Balancing Machine

This precision wheel balancer is designed for accurate and efficient wheel balancing. It features a user-friendly interface, automatic data input, and multiple balancing modes to ensure optimal tire performance and vehicle handling.

Overview

Professional Wheel Balancing Solution

This precision wheel balancing machine is engineered for accuracy and efficiency in demanding automotive environments. It features an intuitive user interface and automatic data input capabilities, streamlining the balancing process for various wheel types. Designed for tire service centers and repair shops, this unit ensures optimal tire performance and improved vehicle handling.

Technical Specifications

Model Identifier	U-100
Balancing Modes	Dynamic, Static, Alloy

Key Features

Operational Capabilities

- Automatic data input
- User-friendly digital interface
- High-precision sensors
- Multiple wheel balancing modes

Application

Suitable Environments

Automotive Repair Shops • Tire Service Centers
