

# Wheel Loader for Mining and Construction

The ZL50GN wheel loader is a heavy-duty construction machine designed for efficient material handling in mining and construction environments. This robust loader features a large bucket with reinforced teeth for effective digging and loading.

## Overview

### Heavy-Duty Performance

This wheel loader is engineered specifically for demanding mining and construction environments. It features a robust, reinforced bucket design for high-efficiency material handling and a sturdy frame built to endure heavy workloads. The operator cabin is designed with a focus on visibility and control, ensuring safety and precision during operation.

## Technical Specifications

Equipment Category	Wheel Loader
Primary Applications	Mining, Construction, Material Handling

## Key Features

### Performance Highlights

#### 1 Reinforced

Bucket Durability

#### 1 High Traction

Terrain Compatibility

### Design Advantages

- Reinforced bucket teeth for digging efficiency
- Large, durable tires for stability on uneven terrain
- Enhanced operator cabin visibility
- Responsive hydraulic system

### Component Status

Powerful Engine • Robust Frame • Hydraulic System
