

Wheeled Excavator

The wheeled excavator is a versatile construction machine designed for digging and material handling. Its wheeled design allows for easy maneuverability on various terrains.

Overview

High-Efficiency Wheeled Excavator

This latest generation wheeled excavator combines premium international components with advanced structural engineering to deliver reliable, high-performance results. Designed for optimal operator comfort, it features an ergonomic air-conditioned cabin with wide-vision capabilities. Its versatile design makes it an ideal choice for road construction, city infrastructure projects, and municipal pipe-laying tasks.

Performance

Key Capabilities

- Dual hydraulic pump system with reverse flow control
- Smart, responsive integrated hydraulic control with priority functions
- Advanced health monitoring and failure diagnosis system
- Independent hydraulic steer and drive system

Engine & Power

Engine Features

Turbo-charged, Charge air cooling, Tier II Emission compliant, Low noise, Fuel efficient

Components

Hydraulic System Origin

Component	Status
Main Pump	Original Import
Main Valve Group	Original Import
Swivel System	Original Import
Drive Motor	Original Import

Operator Environment

Cabin Comfort

Air-conditioned • Adjustable seat • Wide vision • LCD Monitor

Applications

Suitable Applications

- Road construction
- City dwellings construction
- Pipe laying
- Road repair projects
