

# Whirlpool Bathtub Water Circulation Pump

This bathtub whirlpool pump is designed for efficient and reliable water circulation in whirlpool bathtubs. Featuring a durable construction and optimized impeller design, it ensures consistent water flow and pressure for a relaxing bathing experience.

## Overview

### High-Performance Whirlpool Circulation

The APW-G series circulation pump is engineered specifically for hydromassage bathtubs, SPAs, and bubble bath systems. It features a robust, high-temperature resistant engineering plastic casing and a thermal-protected motor to ensure longevity and safe operation. Designed for quiet, consistent performance, this pump effectively boosts oxygen and air pressure for water nozzles, enhancing the overall user experience.

## Technical Specifications

Insulation Class	F
Max. Working Pressure	0.1 MPa
Transmission Medium	Dry air

## Features & Safety

### Safety Features

- Thermal motor protection
- Fuse against high electric current
- High-temperature resistant casing

### Key Benefits

Quiet Operation • Oxygen Boosting • High Pressure • Long Service Life

Certifications	CE, UL
----------------	--------

## Compatibility & Options

### Optional Add-ons

- External heater
- Ultraviolet germicidal lamps
