

White Fused Alumina Abrasive for Blasting and Grinding

This white fused alumina abrasive is suitable for sand blasting, grinding, and polishing applications. It is widely used in high-temperature basic plating, metallurgical applications, and chemical industries.

ADDITIONAL IMAGES

Product Overview

High-Purity White Fused Alumina

This product consists of pure, clear white aluminum oxide crystals known for their high friability and large crystal size. These crystals fracture efficiently during use, constantly exposing fresh cutting surfaces to the workpiece, which makes them ideal for precision finishing and cool cutting applications. It is a versatile abrasive suitable for a wide range of industries, from glass beautification to precision sand casting.

Key Metrics

Monthly Capacity

1500 MT/month

Max Production

Applications

Primary Applications

- Blasting and light lapping operations
- Beautifying glass or acrylic
- Blasting TV screens
- Cutting silicon wafers
- Cleaning and blasting tooth models
- Precision sand casting
- Refractory and ceramic additives

Material Properties

Key Characteristics

High Purity, Friable, Cool Cutting, Heat Resistant, Chemically Inert

Service & Quality

Why Choose This Product

One-stop service • Industry experience since 1999 • A-Grade quality
