

White Rice Grading Machine

This machine efficiently grades white rice by size and quality. Its air-tight sieve and unique track movement ensure effective separation for final product handling.

Overview

Advanced Rice Grading Technology

The White Rice Grading Machine is a newly developed solution that integrates advanced domestic and international technologies to deliver superior performance. Featuring an elegant, stable framework and an air-tight sieve suspension system, it ensures consistent and efficient operation. This equipment is widely recognized as a pioneering tool for final product handling in professional rice milling and processing facilities.

Technical Specifications

Sieve Movement	Unique track of movement
Framework Design	Elegant and stable
Sieve Suspension	Air-tight, hung by four slings

Key Features

Operational Benefits

- Efficient grading performance
- Advanced technology integration
- Suitable for final product handling
- Stable and durable operation
