

Wi-Fi Lighting Controller

This Wi-Fi controller enables wireless control of lighting systems. It features an external antenna for enhanced signal strength and easy installation.

Product Overview

Smart Lighting Control System

This Wi-Fi enabled controller is designed for seamless integration with playLED lighting systems, offering advanced wireless connectivity for remote control and home automation. Its compact design features an external antenna to ensure enhanced signal strength in various environments. The unit is built for easy installation and meets international safety and regulatory standards, making it a reliable solution for professional lighting applications.

Technical Specifications

Design Features

- Compact form factor
- External antenna for signal optimization
- Integrated mounting hardware

Connectivity

Wi-Fi

Certifications

Compliance

FC, CE, RoHS
