

Wide Chute Slow Juicer

This slow juicer features a wide feeding tube for processing whole fruits and vegetables. It operates at a low speed of 50-60 RPM to minimize heat and oxidation, preserving nutrients.

Overview

Nutrient-Rich Slow Extraction

This Wide Chute Slow Juicer utilizes low-speed spiral extraction technology to mimic the gentle action of squeezing a towel. By rotating at a slow speed, it extracts juice without damaging the cellular structure of fruits and vegetables, effectively preserving vital nutrients and enzymes. The large feeding tube design simplifies the process by allowing for whole produce juicing with minimal preparation.

Performance

Performance Highlights

450 ml

Max Capacity

Extraction Method	Low-speed spiral extraction
--------------------------	-----------------------------

Operation

Functional Features

- Large feeding tube for whole fruits
- Transparent components for process monitoring
- Graduated juice container
- Integrated washing function
- Low heat and oxidation operation

Processing Modes	Soft, Jam, Nuts milk, Salad
-------------------------	-----------------------------

Control Interface

Control Panel Settings

Menu • Start • Power • Washing
