

Wind Turbine

Wind turbines convert kinetic energy from wind into electrical energy. They are a key component in renewable energy systems for generating clean power.

Product Overview

Renewable Wind Energy Solution

This high-capacity wind turbine is engineered to harness wind energy efficiently for sustainable power generation. Designed for professional use in renewable energy projects, it provides reliable performance in diverse environments. Its robust construction ensures long-term operational stability and contributes to sustainable development goals in the power sector.

Key Performance Metrics

Performance Highlights

2000 kW
Rated Capacity

120 m
Rotor Diameter

Certifications & Compliance

Standard Compliance

ISO 9001, CE Certified, Renewable Energy Standard
