

Wind Turbine

Wind turbines convert wind energy into electrical power using rotating blades and a generator. These systems are a key component in renewable energy infrastructure, providing a sustainable source of electricity.

Product Overview

Industrial Wind Energy Solution

This wind turbine system is engineered for utility-scale power generation, featuring a robust tower design and a three-blade rotor configuration. Designed for efficient energy harvesting in open landscapes, the unit supports reliable performance in the electric power industry. Its construction is optimized for heavy-duty installation and long-term maintenance accessibility.

Technical Specifications

Number of Blades	3
Installation Type	Utility-scale, Onshore

Operational Requirements

Maintenance Compatibility	Yes
