

Wind Turbine Generator

This wind turbine generator is designed for renewable energy production. It features a three-blade rotor system and advanced power conversion technology for reliable operation.

Product Overview

High-Efficiency Wind Energy Solution

This high-efficiency wind generating set is engineered specifically for professional renewable energy production. Featuring a robust three-blade rotor system and advanced power conversion technology, it ensures reliable and consistent energy output. Its durable construction is designed to withstand diverse environmental conditions, making it an ideal choice for large-scale wind farms and distributed generation projects.

Technical Specifications

Rotor Design	Three-blade rotor system
Core Technologies	Advanced Power Conversion, High-Efficiency Design, All-Weather Durability

Applications

Primary Applications

- Wind farms
- Distributed generation
