

Wind Turbine Generator Motor

Motor designed for wind turbine generators ranging from 300W to 20KW. It features a robust construction for reliable performance in various environmental conditions.

Overview

High-Efficiency Wind Turbine Motor

This high-efficiency motor is specifically engineered for wind turbine generator systems. It offers a versatile power range from 300W up to 20KW, making it suitable for various renewable energy configurations. Designed with robust construction to withstand diverse environmental conditions, this motor ensures reliable energy conversion for power transmission and distribution applications.

Technical Specifications

Key Performance Metrics

300 W

Minimum Power

20 KW

Maximum Power

Power Output Range

300W - 20KW

Primary Application

Wind Turbine Generator, Electric Power Transmission, Energy Distribution
