

Winged Rotary Mower

This winged slasher is designed for compact and utility tractors. The increased side frame depth increases cut material capacity.

Overview

High-Performance Folding Wing Slasher

The 9GY-4.5 Winged Rotary Mower sets the standard for flex-wing cutters, specifically designed for compact and utility tractors. It features the deepest deck in the industry, which significantly increases side frame depth and cut material capacity for superior performance. This robust agricultural implement is engineered for efficient grass cutting and vegetation management across diverse terrains.

Key Performance Metrics

Key Performance Metrics

4500 mm
Cutting Width

2000 kg
Total Weight

150 HP
Max Matched Power

Technical Specifications

The folding wing design allows for efficient transport and wide-area coverage during operation.

Dimensions & Capacity

Parameter	Value	Unit
Overall Width	4700	mm
Overall Length	4900	mm
Overall Height	600	mm
Cutting Width	4500	mm
Cutting Height Range	100-300	mm
Total Weight	2000	kg

Operation & Compatibility

Linkage System	Traction / Trailed
Matched Power Range	100-150 HP

Safety & Design Features

The multi-wheel design ensures stability and maneuverability across various agricultural terrains.

Integrated safety chains minimize debris scattering during high-capacity mowing operations.

Safety Systems

- Protective safety chain curtains to prevent debris scattering
- Heavy-duty deep deck design for increased material capacity
- Hydraulic system for adjustable cutting height and angle
- Multi-wheel configuration for stability on uneven terrain
- Enclosed cutting housing for consistent performance

Primary Applications

Pasture Maintenance, Field Mulching, Vegetation Management, Large-scale Mowing
