

# Wire and Cable Processing Machine

This heavy-duty machine is designed for efficient handling of metallic wires or cables. It ensures precise and consistent processing using guide rollers and tension control devices for optimal performance.

## Overview

### Industrial Wire and Cable Processing System

This heavy-duty metallic processing machine is engineered for high-efficiency wire and cable handling in demanding industrial environments. It features a robust dual spool winding and unwinding mechanism, supported by a central motor and drive system for consistent output. With integrated guide rollers and precise tension control, this machine ensures reliable performance and durability for long-term production needs.

## Technical Specifications

### Key System Features

- Dual spool winding mechanism
- Dual spool unwinding mechanism
- Central motor drive system
- Integrated guide rollers
- Tension control devices

### Processing Capability

Metallic Wire, Cable Processing

## Construction

### Construction Quality

Heavy-duty • Durable Materials • Industrial Grade

### Base Support

Sturdy industrial base
