

Wire Cutting and Bending Machine

This machine is used for cutting and bending wire. It is commonly used in scrap metal recycling to process wire into more manageable forms.

Product Overview

Industrial Wire Processing Solution

This Wire Cutting and Bending Machine is engineered for high-efficiency processing of industrial-grade wire materials. Designed to handle robust reclamation tasks, it is ideal for operations involving copper wire scrap and various electrical cable gauges. This equipment streamlines the cutting and bending process, ensuring consistent results for recycling and manufacturing applications.

Capabilities

Core Functions

- Wire Cutting
- Wire Bending

Compatible Materials

Copper Wire, Electrical Cable, Industrial Scrap
