

Wire Insertion Punch Down Tool

This punch down tool inserts wires into insulation displacement connectors (IDC) on patch panels, keystone modules, and surface mount boxes. It ensures reliable network connections through proper wire insertion and termination, featuring a spring-loaded mechanism and a blade for cutting excess wire.

Product Overview

Professional Termination Tool

This wire insertion punch down tool is designed for precise and reliable network installations. It is engineered to seat wires into insulation displacement connectors (IDC) on patch panels, keystone modules, and surface mount boxes. The integrated spring-loaded mechanism ensures consistent termination force for every connection, while the built-in blade automatically trims excess wire for a clean, professional finish.

Technical Specifications

Compatible Components

- Patch Panels
- Keystone Modules
- Surface Mount Boxes

Primary Functions

Wire Insertion, IDC Termination, Excess Wire Cutting

Mechanism

Spring-loaded
