

Wired Microphone with Metal Ball Grill

This wired microphone is designed with a metal ball grill. It operates in the VHF 210-270MHz frequency range to minimize interference.

Product Overview

Professional Vocal Performance

The PT-799 is a robust wired microphone featuring a durable plating metal construction and a protective ball grill design. Engineered for high-stability audio, it utilizes quartz crystal oscillating circuitry and advanced compress/comping technology to deliver clear sound with minimal noise interference. Ideal for KTV performances, family amusement, and outdoor events, this microphone provides professional-grade reliability and dynamic range.

Technical Performance

Featured Performance Metrics

90 dB Dynamic Range	80 dB Signal to Noise Ratio	80 m Working Distance
-------------------------------	---------------------------------------	---------------------------------

Frequency Response	40Hz-20KHz
Total Harmonic Distortion	< 1%

Audio Connectivity

Output Configuration	Independent Output, Mix Output
Audio Output Level	500 mV

Hardware Specifications

Microphone Type	Dynamic • Uni-directional
Housing Material	Zinc Alloy with Spray Painting
Impedance	600 ©
Power Consumption	2 W
