

Wireless Data Transmission Device

This network communication device is designed for reliable wireless data transmission. Featuring a compact and robust enclosure, it is suitable for outdoor installations.

Overview

Reliable Wireless Connectivity

This wireless data transmission device is engineered for robust performance in challenging environments. Featuring a compact and durable enclosure, it is specifically designed for outdoor installations, including pole-mounted setups. With its integrated antenna, the device ensures optimized signal strength and coverage, making it an ideal solution for point-to-point and point-to-multipoint network applications.

Physical Characteristics

Mounting Type	Pole-mountable
Installation Environment	Outdoor, Industrial
Enclosure Design	Compact and robust

Technical Specifications

Supported Applications

- Point-to-point network
- Point-to-multipoint network

Antenna System	Integrated optimized antenna
