

Wireless Door Chime System

This wireless door chime system consists of a chime unit and a push button transmitter. When the button is pressed, the transmitter sends a wireless signal to the chime, which plays a selected sound.

Overview

Professional Wireless Door Chime System

This wireless door chime system offers a reliable and convenient solution for visitor notification without the need for complex wiring. Featuring anti-interference digital technology with 19683 pairs of coding, it ensures accurate operation even in environments with potential screen interference. With an IP44-rated waterproof transmitter and energy-efficient design, it is built for long-term outdoor and indoor performance.

Technical Specifications

Operating Frequency	433MHz or 315MHz
Operating Range	100 m
Coding Capacity	19683

Power & Efficiency

Receiver Battery Life

6 months

Receiver Runtime

Transmitter Battery Life

2 years

Transmitter Runtime

Features

Ingress Protection

IP44 Waterproof • Dustproof

Melody Selections

- 16-chord melody rings (Digital)
- 8-chord melody rings (Learning Code)

Certifications

CE, FCC
