

Wireless Interconnected Smoke Detector for Residential Use

This wireless interconnected smoke detector is designed for residential safety, offering early fire hazard warnings. The detectors can be wirelessly linked, so an alarm on one unit triggers all interconnected units, increasing the chance occupants are alerted, no matter where they are in the building.

Overview

Residential Fire Safety Solution

This wireless interconnected smoke detector is engineered for comprehensive residential fire safety. By linking multiple units wirelessly, the system ensures that if one detector identifies a hazard, all units in the network will sound an alarm simultaneously, providing critical early warning throughout the building. Designed for reliability, these battery-powered detectors ensure continuous protection even during power outages.

Key Features

Core Features

- Wireless interconnection capability
- Synchronized alarm activation
- Battery-powered operation
- Test and hush button functionality

Model Identifier

KD-101LE

Application

Intended Use

Residential, Homes, Apartments

Maintenance

Maintenance Controls

Test Button • Hush Button
