

Wireless Network Bridge

This device enables wireless data transmission between networks. It is equipped with external antennas and multiple ports for versatile network integration.

Product Overview

High-Performance Wireless Network Bridge

This wireless network bridge is engineered for reliable data transmission in demanding environments. Featuring a ruggedized enclosure and external high-gain antennas, it ensures robust signal strength and consistent connectivity. Designed with versatility in mind, the unit includes multiple wired ports for seamless network integration, making it an ideal solution for industrial or outdoor infrastructure deployments.

Technical Specifications

Connectivity Features

- External high-gain antennas
- Multiple wired network ports
- Wireless data transmission

Device Type	Wireless Network Bridge
Application Environment	Industrial, Outdoor, Network Infrastructure

Build Quality

Enclosure

Ruggedized • Weather-Resistant
