

Wireless Sensor Network Gateway

This gateway is designed for data acquisition and transmission in various applications. It supports multiple communication interfaces, including Ethernet and wireless, and is designed for industrial environments and remote monitoring applications.

Overview

Industrial Wireless Sensor Network Gateway

This wireless sensor network gateway is engineered for robust data acquisition and reliable transmission in demanding industrial environments. It provides versatile connectivity through both Ethernet and various wireless protocols, facilitating seamless integration into remote monitoring systems. Designed for professional use, it supports multiple sensor protocols to ensure compatibility with a wide range of industrial applications.

Connectivity & Interfaces

Communication Ports	Ethernet, Wireless
Sensor Protocol Support	Yes

Operational Details

Suitable Environments

- Industrial settings
- Remote monitoring sites

Primary Functions

- Data acquisition
- Data transmission
