

Wood Shaping and Finishing Machine

Precision woodworking machinery designed for shaping and finishing wood products. The machine features a rotating table, multi-axis adjustable arm with a spindle, and a control panel.

Overview

Professional Wood Shaping and Finishing

This high-precision woodworking machine is engineered for versatile shaping and finishing applications. Featuring a robust frame, it provides stability for tasks ranging from intricate profiling to sanding and polishing. Equipped with an integrated coolant system and professional-grade dust collection, it ensures optimal performance and a clean work environment for demanding industrial wood processing.

Technical Specifications

Components

- Rotating workpiece table
- Multi-axis adjustable spindle
- Integrated control panel
- Coolant system
- Dust collection ports

Core Capabilities

Profiling, Sanding, Polishing, Multi-axis adjustable arm

Construction

Construction Standards

Heavy-duty frame • Precision engineering
