

Woodworking Lathe

This woodworking lathe is designed for precision turning and shaping of wood. It features a cast iron bed for stability and variable speed control.

Overview

Professional Heavy-Duty Woodworking Lathe

This heavy-duty woodworking lathe is engineered for precision turning and shaping, providing a reliable solution for professional workshops. Built with a robust cast-iron bed, it ensures exceptional stability and vibration dampening during intensive operations. The machine features a powerful motor and variable speed control, allowing users to adapt seamlessly to various wood types and complex project requirements.

Technical Specifications

Key Performance Features

- Variable speed control for material adaptability
- High-efficiency motor for material removal
- Stable cast-iron bed for vibration dampening
- Adjustable tool rest for precise positioning
- Tailstock with quill for center support

Construction Material

Cast Iron

Applications

Primary Applications

Precision Turning • Wood Shaping

Target User

Professional Woodworkers, Serious Hobbyists
