

Worm Gear Speed Reducer

This worm gear speed reducer provides efficient power transmission and speed reduction. It features a robust housing and high-quality bearings for reliable performance and extended service life.

Product Overview

High-Efficiency Worm Gear Reducer

This precision-engineered worm gear speed reducer is designed for reliable power transmission and smooth motion control in demanding industrial environments. Featuring a robust housing and high-quality internal components, it ensures long-lasting performance and consistent speed reduction. It is an ideal solution for applications requiring high torque capacity, compact integration, and operational stability.

Technical Specifications

Model Number	MVF50-30-71B14L
Gear Ratio	30 : 1

Performance Metrics

Performance Highlights

30 : 1 Reduction Ratio	50 mm Frame Size
----------------------------------	----------------------------

Features

Main Advantages

- High torque capacity
- Smooth and precise motion control
- Robust, durable housing construction
- Multiple mounting configurations available

Industrial Standards	Precision Engineered, High Efficiency, Industrial Grade
----------------------	---
