

Wound Rotor Asynchronous Motor

This high-performance motor is designed for demanding industrial applications. It features robust construction, efficient operation, and adjustable speed control.

Product Overview

Industrial Wound Rotor Motor

This high-performance wound rotor asynchronous motor is engineered for demanding industrial applications requiring reliability and precision. It features a robust construction suitable for harsh environments and provides excellent adjustable speed control. Designed for heavy machinery, pumps, and compressors, this unit offers the variable torque characteristics necessary for complex industrial operations.

Technical Features

Motor Technology	Wound Rotor Asynchronous
Key Operational Benefits	Adjustable Speed, Variable Torque, Robust Construction, High Efficiency

Applications

Primary Applications

- Heavy Machinery
- Industrial Pumps
- Compressor Systems
