

Wrought Alloy Tubes

Wrought alloy tubes provide excellent strength and durability. These tubes are corrosion-resistant and suitable for automotive, plumbing, and industrial applications.

Product Overview

Precision-Engineered Performance

These high-quality wrought alloy tubes are designed for exceptional strength, durability, and corrosion resistance. They are precision-engineered to provide optimal performance and longevity across a wide array of industrial, automotive, and plumbing applications. Available in various sizes and thicknesses, these tubes are built to meet the rigorous demands of professional projects.

Product Portfolio

Available Component Range

- Slide bearings
- Self-lubricating bearings
- Solid lubricant inlaid bearings
- Self-lubricating plates
- Self-lubricating gaskets
- Copper sleeves and bushings
- Brass components
- Copper turbines

Applications

Industry Applications

Automotive, Plumbing, Industrial Machinery, Bearing Assembly
