

XK-160 Open Mixing Mill

The XK-160 open mixing mill is designed for mixing and processing rubber and plastic materials. It features horizontally opposed rollers that rotate at different speeds, creating a shearing action for effective blending and kneading.

Overview

Professional Mixing Solution

The XK-160 Open Mixing Mill is a robust, high-performance machine specifically engineered for the rubber and plastic manufacturing industries. Utilizing two horizontally opposed rollers rotating at differential speeds, it provides superior shearing action for efficient compounding, kneading, and sheeting of materials. Built with a heavy-duty frame and adjustable roller gaps, this mill ensures stable, long-term operation for critical production tasks.

Technical Specifications

Roller Configuration	Horizontally opposed with differential speed rotation
Roller Gap Adjustment	Yes

Safety and Compliance

Integrated Safety Systems

- Emergency stop devices
- Protective guards

Applications

Primary Applications	Rubber Compounding, Plastic Mixing, Sheeting
----------------------	--
