Product Overview

Precision Y-Axis Component

This Y-axis screw ball assembly is a high-precision component specifically designed for integration with high-speed surface mount technology placement machinery. It is engineered to maintain accurate and reliable motion control within the Y-axis system, essential for maintaining the operational efficiency and placement precision of production lines. This component serves as a direct replacement part for maintenance and overhaul, ensuring the equipment continues to meet its original performance standards.

Technical Details

Machine Compatibility

- YG200 SMT Machine

Product Condition

Original New

Part Number

KV7-M2671-03X

Quality Assurance

Component Category

SMT Spare Parts, Y-Axis Assembly, Precision Component
