Product Overview

High-Efficiency YJ58 Series Motor

The YJ58 electric motor is precision-engineered for sous vide systems and ventilation fan applications. Featuring a compact cylindrical design and high-quality copper windings, it ensures efficient power transmission and reliable, quiet performance. Its robust housing and durable construction make it an ideal choice for various household appliances requiring consistent, long-term operation.

Technical Specifications

Key Features

- Compact cylindrical design
- High-efficiency copper windings
- Engineered for quiet operation
- Robust housing for longevity

Typical Applications

Sous Vide, Ventilation Fans, Household Appliances, Air Fryers, Nebulizers

Compliance and Quality

Certifications

CE • UL • VDE • 3C • RoHS • REACH

Management Systems

ISO9001, ISO14001
