

Yogurt Production Line

This yogurt production line standardizes the fat and dry matter contents through heat treatment and homogenization. It is suitable for producing set or stirred yogurt.

ADDITIONAL IMAGES

Overview

Integrated stainless steel yogurt processing line featuring advanced fermentation and mixing technology.

Comprehensive Yogurt Processing Solution

This advanced yogurt production line is engineered for the versatile manufacturing of set, stirred, drinking, frozen, and concentrated yogurt products. Designed for high efficiency and hygienic operations, the system integrates automated processes from fat standardization and heat treatment to precise fermentation and filling. It offers industrial-grade scalability with a processing capacity ranging from 5 to 100 tons per day, ensuring maximum yield and consistent nutritional quality.

Performance

Daily Production Capacity	100 tons/d
---------------------------	------------

Production Capability

Compatible Packaging

Cup • Gable Top Carton • Bottle

Supported Product Varieties

Stirred Yogurt, Set Yogurt, Drinking Yogurt, Frozen Yogurt, Concentrated Yogurt, Kefir

Key Advantages

Operational Advantages

- Customized recipe realization
- Multi-product processing flexibility
- Accurate ingredient dosing
- High nutritional value retention
- Maximum yield and minimal waste
- Advanced energy-saving technology
- Complete line supervision system
- Automated production data logging
