Overview

Professional Compaction Solution

The YZ1 Vibratory Roller is a compact, high-performance machine engineered for precise soil compaction and asphalt paving. Its robust mechanical transmission and vertical vibration system deliver reliable force, ensuring uniform density in varied ground conditions. Designed for versatility, this unit is perfectly suited for small to medium-sized construction projects, including narrow paths and confined spaces.

Technical Specifications

Design Features

- Mechanical moving transmission
- Vertical vibration system
- Compact narrow-ground design
- Includes dedicated transport cart

Suitable Applications

Soil Compaction, Asphalt Paving, Narrow Ground Projects, Road Maintenance
