

YZ20JC Single Drum Vibratory Roller

This single drum vibratory roller is a type of construction machinery used for soil compaction. It features a large steel drum at the front for smoothing surfaces.

Overview

Professional Soil Compaction Solution

The YZ20JC Single Drum Vibratory Roller is a robust piece of construction machinery engineered for efficient soil compaction. Featuring a heavy-duty front steel drum and reliable rear propulsion, this unit is designed to handle demanding site preparation and road construction tasks. Its operator-focused cabin ensures control and visibility during operation, making it an essential asset for large-scale infrastructure projects.

Technical Specifications

Equipment Type

Single Drum Roller • Vibratory Roller • Construction Machinery

Model Identifier

YZ20JC

Application

Primary Applications

- Road construction
- Soil compaction
- Site preparation
