

YZ20JW Soil Compactor

The YZ20JW is a heavy-duty construction machine designed for soil compaction and road construction. It features a large steel drum at the front for compacting materials and heavy duty tires on the rear axle for traction.

Overview

Heavy-Duty Soil Compaction Power

The YZ20JW is a robust construction machine engineered specifically for demanding soil compaction and road construction projects. It features a high-performance steel drum design at the front for effective material density, paired with heavy-duty rear tires to ensure superior traction on uneven terrain. Designed with operator welfare in mind, the unit includes a fully enclosed cabin to maintain productivity and safety in various environmental conditions.

Key Metrics

Model Identifier	YZ20JW
Primary Application	Soil Compaction, Road Construction

Design & Features

Compaction System

- Front steel drum
- Rear heavy-duty traction tires
- Fully enclosed operator cabin

Safety & Comfort

Enclosed Cabin • Heavy-Duty Construction
