

Zirconium Flap Discs for Metal Grinding

Zirconium flap discs are abrasive tools for grinding, blending, and finishing metal surfaces. The overlapping flap design ensures consistent material removal and a smooth finish on contoured surfaces.

Product Overview

High-Performance Metal Grinding

Zirconium flap discs are essential abrasive tools designed for efficient grinding, blending, and finishing of metal surfaces. Featuring overlapping abrasive flaps bonded to a durable backing plate, these discs deliver aggressive cutting action suitable for demanding tasks like weld removal and deburring. Their design ensures consistent material removal and a smooth finish, offering excellent flexibility for contoured surfaces in metalworking, fabrication, and construction applications.

Technical Specifications

Abrasive Material	Zirconium
Backing Plate Materials	Fiberglass, Plastic

Application & Usage

Primary Applications

- Weld removal
- Deburring
- Surface preparation
- Blending
- Finishing

Compatible Tools	Angle Grinder
------------------	---------------

Performance Metrics

Key Performance Indicators

1 High Cutting Aggression	1 High Durability
-------------------------------------	-----------------------------
